DANIEL BRAINARD, M.D., Prest. of the College,	

FACULTY:

DANIEL BRAINARD, M.D.
Prest., and Professor of Surgery.

JAMES V. Z. BLANEY, M.D.
Professor of Chemistry and Pharmacy, and Dean of the Faculty.

JOHN McLEAN, M.D.
Professor of Materia Medica and Therapeutics.

W. B. HERRICK, M.D.
Professor of General and Descriptive Anatomy.

G. N. FITCH, M.D.
Professor of Institutes and Practice of Medicine.

JOHN EVANS, M.D.
Professor of Obstetrics and Diseases of Women and Children.

J. HERMAN BIRD, A.M.
Prosector to Professors of Surgery and Anatomy.

ANNOUNCEMENT.

THE ANNUAL COURSE OF LECTURES for the session of 1845 and 1846, will commence on the 1st Monday of November, and continue sixteen weeks.

The fees for the different courses will be as follows:

Anatomy,	-	-	-	\$10
Surgery,	-	-	-	10
Institutes and Practice of Medicine,	-	-	-	10
Obstetrics, &c.,	-	-	-	10
Chemistry and Pharmacy	-	-	-	10
Materia Medica and Therapeutics,	-	-	-	5
Matriculation Fee,	-	-	-	
Total,	-	-	-	\$65

The fee for the Dissecting Ticket is \$5. This is optional with the student to take or decline, but it is strongly recommended that each student practice dissection at least once during his course of studies.

The Graduation fee is \$20.

Good Boarding, with room, fuel, lights, and attendance, can be obtained in Chicago, at from \$1,50 to \$2,50 per week.

REQUIREMENTS FOR GRADUATION, are three years study with a respectable physician, and two courses of lectures, one of which must be in this institution, (or two years practice will be received in lieu of one course.) The candidate must be 21 years of age; of good moral character; must present a thesis, on some medical subject, of his own composition and in his own hand writing, which shall be approved by the Faculty; and pass a satisfactory examination on all the branches taught in this College.

CIRCULAR.

It is less than two years since the first announcement for a course of lectures in the Rush Medical College was issued. There was then no building belonging to the institution, and the means of teaching were limited, yet the first class numbered twenty-two. During the second year, preparations were made for the erection of a spacious and suitable edifice, as well as for procuring additional means of instruction; and although these were far from being completed at the commencement of the last term, the number of students was, as will be perceived by the catalogue, more than doubled. During the progress of the second course, the building was finished, and found to be extremely convenient, and the facilities for affording instruction in all the different branches, have, since that period, been greatly increased.

In the Anatomical Department, every tissue and organ will be minutely and carefully demonstrated, by means of frequent recapitulations, plates, preparations, and careful dissections; due reference being had, throughout the course of instruction upon this most important branch, to its physiological and practical connections. And, as ample facilities are offered for the study of practical anatomy, the professor, or his assistant, will be present, every evening, at the college rooms, to assist and instruct those who may desire to avail themselves of the advantages for dissecting.

In the Chemical Department, the means of illustration have been much increased since the last term. Among the various additions to the apparatus, may be mentioned a fine Microscope, of sufficient power to exhibit the blood globules, spermatic animalculæ, the elementary tissues, and pathological structures. A fine collection of Minerals has been placed in the Museum of the Institution, as the commencement of a Cabinet of Natural History.

The relations of Chemistry to the various branches of Medicine;—the Poisons, their Antidotes and Medico-legal bearing;—Organic Chemistry, including the recent developments and their connection with Physiology and Diseases,—will meet with the attention which they deserve.

The Department of Pharmacy, being added to that of Chemistry, will be fully discussed and practically illustrated.

In the course of Obstetrics and Diseases of Women and Children, great pains will be taken to give thorough practical instruction, and in addition to the usual means of illustrating the Mechanism of Labor, the Atlas of the great work of Boivin and Dugés, on the Diseases of the Uterus and its appendages, will be used to illustrate the pathology of those organs.

A full collection of specimens of the *Materia Medica* will be employed in the course on that branch, and those articles

which are indigenous to the Western States, and in most common use, will be dwelt upon with peculiar care.

In addition to a very perfect set of surgical instruments, and apparatus for treating fractures, deformities, &c., all operations will be performed upon the dead subject, and a considerable number upon the living. In order to afford facilities for this latter purpose, the surgical clinic will be continued as usual. During the past session, numerous cases presented themselves, among them some requiring the following operations, which were performed in presence of the class:

Removal of Tumors,	- 3	Blepharoplasty,	- - 1
Extraction of Nasal Poly-	- 1	For Obstruction of Lach-	- - 1
pus,	- - 1	rymal Duct,	- - 1
Strabismus,	- - 4	Extirpation of Tonsils,	- 2

Operations will be performed gratuitously on indigent persons, before the class.

With these advantages, the Medical College at Chicago offers, it is believed, inducements to Western students, equal at least, to those of any other school, especially to persons whose future practice is to be in Illinois, or any of the adjoining States, as they will be enabled, during their studies, to become acquainted with the character of the endemic diseases of the country, and also to select the most favorable spot for their future residence. On the part of the Faculty, no effort shall be wanting to advance the interest of the profession and elevate the standard of medical science, by imparting a thorough knowledge of all its different branches, by inculcating liberal views of its objects, and conferring diplomas upon those only who are in every respect worthy to receive them.

Students are recommended to supply themselves with the following works on the different subjects:

Anatomy, Horner's, Wilson's, and Wilson's Dissector.
Surgery, Cooper's Dictionary, Cooper's First Lines, Miller's, Drutt's, and Fergusson's Surgery.
Institutes and Practice of Medicine, Dunglison's Practice, Stokes and Bell's Practice, Carpenter's or Müller's Physiology.
Chemistry, Kane's, edited by Draper, or Graham's, edited by Bridges.
Obstetrics, &c., Dewees' and Chailly's Midwifery, Rambotham's Principles of Parturition, Dewees & Churchill on Females, Stewart & Condie on Children.
Materia Medica, Pereira's *Materia Medica*, and United States' Dispensatory.

ILLINOIS MEDICAL AND SURGICAL JOURNAL.

THIS publication has now reached the 4th No. of its 2d vol. Being the first and only Medical Periodical in the State of Illinois, or indeed in the North-West, it may be said to have a local claim upon Medical men in this State and region. Its circulation is already so large as to insure its continuance, and should the number of subscribers increase sufficiently, the publishers hope to be able to enlarge it without any addition in the price of subscription. At present it is published monthly, at the rate of \$1.00 per annum in advance; under the editorial conduct of JAMES V. Z. BLANEY, M.D., Professor of Chemistry and Pharmacy in the Rush Medical College.

The number of medical publications received in exchange, enable the editor, in addition to original matter, to inform subscribers upon all subjects of professional interest, at an early date after their publication. Below is given the table of contents of the first number of the second volume:

Introductory.

Case of Encephaloid Tumor of the Ovaries. By W. Butterfield, M. D.

BIBLIOGRAPHICAL NOTICES.

Of Puberty and the Critical Age of Women, and of the Periodical Discharge of Ova by Women and the Mammiferæ. By M. A. Raciborski, M. D.

Proof of the Periodical Ripening and Separation of the Ova of Mammiferæ and Man, independent of Cöitus, being the first condition of their Propagation. By Th. L. W. Bischoff, M. D.

Introductory Lectures.

An Address on Insanity, By John Evans, M. D.

The First Lines of the Theory and Practice of Surgery, including the principal operations. By Samuel Cooper.

MEDICAL INTELLIGENCE.

Miss Martineau's Marvelous Mesmerization Unmystified.

PRACTICAL MEDICINE, &c.

An easy and certain method of performing Catheterism, even in the most difficult cases. By J. G. Maisonneuve.

Blisters in Children.

Case of Singultus of several years standing cured by Acupuncture, by Dr. Emiliani.

New Method of Dressing Wounds and Ulcers. By Dr. Laugier.

The invitation is again extended to subscribers and others to forward to the editor communications upon medical subjects, and reports of interesting cases.

All communications to be directed to the Editor *post-paid*. Subscriptions to be sent *in advance free of postage*, to

ELLIS & FERGUS,
PUBLISHERS.

Chicago, August, 1845.

TO PHYSICIANS AND STUDENTS.
